

Lightweight Wood-Look Panels

Ceilume

The company's thermoformed panels provide the luxurious look of wood ceilings without the weight. St. Mary the Virgin Church in Arlington, Texas, used them to add visual warmth to their building's starkly modernist interior, selecting the classic Stratford style with a faux Carmel Wood finish. The panels weigh just 0.20 pound per square foot, so they could be used with the existing suspended ceiling grids. Ceilume panels are easy to install, acoustical, and durable. Impervious to water, the panels are washable, highly stain resistant, and will not sag nor support mold. Ceilume offers 50 styles, 16 finishes, and endless possibilities.
